

Note:
I prefer to add `tr_transition` to
ModalViewController(MianViewController), but
more app will present a
UINavigationController, but maybe you
just coding for UIViewController for project. I
am not sure I should set the
MainViewController for who. So I just set
`tr_transition` for MainViewController.
For more, I can implement set `tr_transition`
for ModalViewController, but I don't support,
and you?
